Attic insulation rebates

A quick guide to the Home Renovation Savings program, delivered by Enbridge Gas and Save on Energy.

UP TO

$1,250

No home energy assessment required.
The rebate covers 50% of eligible insulation costs **after tax**, up to the applicable maximum.

Attic insulation rebate tiers

Existing attic insulation	Minimum final level	Maximum rebate
R-12 or less	R-50	$1,250
Above R-12 to R-25	R-50	$1,000
Above R-25 to R-35	R-50	$800

Cathedral ceiling / flat roof insulation tiers

Existing insulation	Minimum final level	Maximum rebate
R-25 or less	R-28	$750
R-12 or less	R-20	$650

Who may qualify?

You own an eligible Ontario home. Detached, semi-detached and row/townhomes may qualify, as do mobile homes on a permanent foundation. Stacked townhomes and new homes occupied for six months or less do not qualify.

Your heating source meets program rules. Natural gas heating requires an active Enbridge Gas account. Homes heated with electricity, oil, propane or wood must be connected to Ontario's electricity grid; Cornwall Electric is excluded.

Eligibility, funding and program terms apply.

Before you upgrade

Start with eligibility. Then plan the insulation, air sealing and ventilation together.

1

Confirm eligibility before work begins

Pre-register through the official program and choose a participating insulation contractor. Work completed before the contractor's in-home visit is not eligible.

2

Have your attic checked

The contractor confirms existing insulation and the required upgrade. To qualify, 100% of the roof assembly area must be insulated. Mention any previous insulation rebates.

3

Review the scope and complete the work

Confirm the insulation level, air sealing, ventilation and price in writing. Provide the signed program forms, invoices and property tax documents required for your application.

4

Submit documents and receive your rebate

Your participating contractor submits the required installation documents. Keep your records. Payment follows the program's review and approval; the maximum is not a guaranteed payout.

A comfortable home needs more than added insulation

Seal air leaks. Address gaps around ceiling penetrations and the attic hatch.
Keep airflow clear. Protect soffit ventilation and use baffles where needed.
Check moisture. Resolve leaks and moisture concerns before covering them.
